

Investment Strategy

NOVO 5000 strategy was made during the time span from 2010 to 2011. From 2011 to 2014 AM was tested on demo accounts and improved all the time. This strategy has two main tasks. Firstly, getting the drawdown (DD) as low as possible and only then higher profits. This is because, there are many strategies that earn money, but 90% of them because trouble if unforeseen fluctuations (changes) happen in the Forex market.

NOVO 5000 begins trade after many of their own proprietary indicators. If the market goes against the trader, then intelligent lots increment methods are used so the session can be closed with earnings. In your investment strategy you have to understand that the minimal investment is no less than 10,000 USD, and every investment time should not be shorter than 3 months. The expected monthly return is about 10-20%. Maximal DD is about 5 %, but no more than 25%. Please take in account that during the summer months and the Christmas time the system's profit can be considerably smaller.

Risk Management

MA strategy has 8 defence levels. Even though the NOVO 5000 sells up to 9 currency pairs at the same time, its defence mechanisms controls both, the opened currency pair orders, and all the opened orders in total. In the NOVO 5000 strategy everything has been done to protect your investments and earn reasonable profit.

The max DD on Yadix PAMM has been set to no more than 25%. Please take in consideration that, the bigger the risk, the larger amount of money earned and opposite! If you invest in this strategy, you have to be patient and do not get stressed if the floating DD reaches 20 %.
