

Investment Strategy

“Success of the portfolio is based on ultra-low drawdown primarily using a low risk trading style that has been developed with over 25 years of financial trading experience.”

Trading is done with a patient approach to ensure that the portfolio benefits from 90% + winning trades rate for high performance statistics with minimal risk. Trading is implemented manually, mainly by the trading mentor with more than 25 years markets experience and a team of traders on selected major pairs and Gold. Entry and exit points are identified using technical and fundamental analysis and trading indicators for maximum accuracy and controlled risk. To maximise the strategy and for stable growth averaging 17% per month, a minimum investment of 2500 USD is recommended.

Risk Management

Risk is managed by the use of indicators, price tick history and market data to assist in identifying potential breakouts and to help the portfolio remain in normal and low risk exposure. The symbols traded are selected as they historically follow trends and this helps to avoid reversals or random breakouts to protect the account. The trading period is targeted to be short to medium terms for greater risk controls.
