

### Investment Strategy

The ARIA 50 system was built in 2015 and from January 2016 has been working on a real money account. The system is built specially for managing investment accounts.

ARIA 50 trades on 11-14 currency pairs based on an advanced and intelligent order opening and uses three inside build filters. The integrated Money Management system automatically sets necessary lot depending on deposit without trader interference.

To run at maximum efficiency, the ARIA system requires a minimum of \$500 per investors. It is advisable that investors be prepared to for a minimum period of three months where the invested funds should not be withdrawn.

The expected monthly returns are +/- 8% to 12%. System is less profitable in summer months because of slow and flat market.

### Risk Management

ARIA 50 has a triple level risk management system to protect invested funds. Maximum drawdown should not to exceed 30% and the system does not open new trades before and after important economic news for additional protection.

The trade cycle for one currency pair will use a maximum of 3% of equity of the account value per currency pair. The system sometimes uses trade volume increments, the investment risk level should be classed as low to medium.

Account Management Highlights
