

Strategy

“A conservative manual trading approach on five specific symbols to ensure stability and consistency using a strategy developed over 10 years of trading.”

Trading is fully manual and focuses on a conservative approach and trading mainly on just five popular major pairs for consistent performance and controlled risk. The strategy focuses on trend following and takes in to account the real-time market conditions, technical and fundamental data for risk reduction and maximizing trading opportunities.

Risk Management

The risk level is targeted to remain as low as possible with stop loss and take profits levels implemented when required. No new trades are open before and after important economic news to keep risk of breakouts minimal and full time manual monitoring allows the team to react quickly to abnormal market situations.

Strategy Performance Highlights
